

## PROTIME LS TRANSPONDER

- 12 days of autonomy
- 3 h of charging time
- Automatic standby mode
- Speed < 200 km/h (125 mph)

### Description

The Prottime LS transponder is recommended for the cross (motocross, quad, kartcross ...) and the kart racing.

This transponder is delivered with a Lithium-ion battery or with a direct connection to the vehicle's battery.

When the transponders are in the charger, the standby mode is automatic, which offers an autonomy of several months. Only one charge per year is necessary to maintain the transponders in condition.

The transponders have a 12 days autonomy when they are continuously used. A tricolor LED indicates the level of charge and the autonomy.

The information on the level of charge is sent to the decoder when the transponder passes over the loop.

### Features

#### Lithium-ion battery :

- Autonomy : 12 days
- Charging time : 3 hours (without memory effect)

#### Specifications :

- Emission : magnetic induction
- Maximum speed : 200 km/h (125 mph)
- Maximum height of detection : 2,80 m (9 ft)
- Temperature range : - 20 °C to + 70 °C (-4 à 158 °F)
- Dimensions (with Lithium-ion battery) : 65 X 44 X 22 mm (2.6 x 1.7 x 0.9 in)
- Dimensions (with 12V Power) : 68 X 27 X 23 mm (2.7 x 1 x 0.9 in)
- Weight : 80 g (2.8 oz)

### 3 years warranty
